The present invention describes a carotenoid overproducing microorganism comprising the genes encoding a functional isoprenoid enzymatic comprising the genes encoding a disrupted gene chosen from deab, mreC, and yfhE. Also described is a carotenoid overproducing Escherichia coli microorganism (II) comprising an upper isoprenoid enzymatic biosynthetic pathway comprising an upper isoprenoid enzymatic biosynthetic pathway comprising c the genes crtB, crtH, and crtY, mutations chosen from a mutation in the rpsA gene of the 2904 nucleotide sequence of SEQ ID NO:37 (ADQ14660), mutation in the rpcG gene of the 5454 nucleotide sequence of SEQ ID NO:37 (ADQ14660), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:37 (ADQ14661), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14661), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14661), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14661), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14661), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14661), mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the rbD gene of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ ID NO:30 (ADQ14664), where the genes of the 5454 nucleotide sequence of SEQ ID NO:39 (ADQ14662), or mutation in the proC sequence of SEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel carotenoid overproducing microorganism comprising genes encoding functional isoprenoid enzymatic biosynthetic pathway comprising disrupted genes such as deaD, mreC, and yfhE, useful for producing carotenoid:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 fermentable carbon substrate, growing the carotenoid overproducing microorganism for a sufficient time to produce carotenoid, and optionally recovering the carotenoid from the carotenoid overproducing microorganism. The present sequence represents the reporter plasmid pPCB15 nucleotide sequence, which is used in an example from the present

The invention provides a method for the integration of foreign genetic elements into a bacterial chromosome without the need of a cloning step.

The method relies on the presence of the bacteriophage lambdar Red recombinates system in a recombination proficient bacterial host. At least of inear recombination elements or constructs are co-transformed into the carried chromosome by homologous recombination. Selectable markers used for the carried chromosome by homologous recombination. Selectable markers used for the specific recombinase. The method allows for multiple chromosomal conditionations within Escherichia coli, which is essential when conditionations within Escherichia coli, which is essential when conditionating biosynthetic pathways for industrial purposes. The method is illustrated using isoprenoid/carotenoid biosynthesis as an example. The promoters of key genes that encode the rate-lamiting enzymes involved in the isoprenoid pathway are engineered, resulting in increased beta-carotene production. The present sequence is that of carotenoid reporter plasmid pPCB15, which was used in examples from the invention. Directed integration of an expressible DNA fragment lacking a selectable marker into a bacterial chromosome comprises co-transforming recombination proficient host with at least two linear recombination cacrideridecreararedaracecerridarearracreecegreagereage Gaps 24; Sequence 8609 BP; 1918 A; 2325 C; 2309 G; 2057 T; 0 U; 0 Other; Score 2619.6; DB 12; Lengt Pred. 6546 Novel carotenoid overproducing bacteria such as Escherichia coli or Havobacterium, comprising genes encoding functional carotenoid enzymatic biosynthetic pathway, useful for producing carotenoids such as astaxanthin and beta-carotene. The specification describes a carotenoid overproducing bacteria, which comprise genes encoding a functional carotenoid enzymatic biosynthetic pathway, where the das (D-1-deoxyxylulose 5-phosphate gene), idi, ygbBP and ispB genes are overexpressed, and the yjeR gene (oligo-ribonuclease gene) is down regulated. In bacteria of the invention, the carotenoid enzymatic biosynthetic pathway consists of the genes das, dar (Doxp reductoisomerase), ygpP (also known as ispD), ychB (also known as ispD), ychB (also known as ispD), idi (isopentenyl AATCAGGGCAATCGACACAAGGCGAATACCACGGCATAGAGATCGTTAACTTCAAATGC 6427 ACCGCTGTGCGGTTCATGGTGCGACAGATGCCAGCCCCATCCCCAACCGTGCATGTA 7729 rrrargreccagrecaccaccacrrccareccaccaccaccaccacaaacaccarcagec AATCAGCACAATCGCCAGTACCGCAAACACCACGGCATAAAGATCGTTGAGCTCAAACTT 7669 GCCTTTACGCGGTTCATGATGTGAAGATGCCAGCCCCAACCCCAGCCGTGCATGTA TTTATGCGACAGGCGCCGCTACGATTTCCATCACCACCACGGTTGCCAACAAGATAAGCAC carotenoid; carotenoid enzymatic biosynthetic pathway; dxs

diphosphate isomerase), ispA (farnesyl pyrophosphate synthase), ispB (octaprenyl diphosphate synthase), crtB (geranylgeranyl pyrophosphate synthase), crtB (phytoene dehydrogenase), crtX (seaxanthin glucosyl transferase), crtZ (beta-carotene hydroxylase), crtX (lycopene cyclase). The lytB and dxr gene are optionally overexpressed. Carotenoid overproducing bacteria of the invention are useful for producing carotenoids. The present sequence represents a plasmid pPCB15, which is used during construction of bacteria of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1866
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1926
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                672.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              genetic end product which comprises utilising a homologous recombination system to introduce an integration cassette into a chromosome of a recombination proficient host cell and subsequently utilising a phage transducing system to transfer the multiple integration cassettes into a single host cell in parallel combinatorial fashion. The method of the invention may be useful for redesigning biosynthetic pathways, optimising metabolic flux and creating novel pathways by targeted in vivo chromosomal engineering. The current sequence is that of the plasmid pPCB15 DNA of the invention which contains the Pantoea stewartii
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         432
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            552
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     612
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           732
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Optimizing production of a genetic end product comprises utilizing a phage transducing system to transfer multiple integration cassettes into a single host cell in parallel combinatorial fashion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   caerriecricarararcearaccecerricareacritacricecerreacereace

The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence encoding a geranylgeranyl pyrophosphate synthase under the control of a promoter operable in the organism, and an exogenous nucleic acid sequence encoding a diterpene synthase under the control of a promoter operable in the organism. The invention also relates to methods of producing a
                                                                                                                                                                                         6486
                                                                                                                                                                                                                                        6546

cc diterpene or diterpene precursor and a method of isolating a diterpene cryptase comprising growing several cells in the presence of a polyaromatic resin to make a cell/resin mixture, where at least one of polyaromatic resin to make a cell/resin mixture, where at least one of cc caid sequence of a yeast expression library, and the expression of the nucleic acid sequence is regulated by an inducible promoter under conditions where the expression is induced, filtering the cell/resin mixture with alcohol to produce an extracting the cell/resin mixture with alcohol to produce an organic eluent and analysing the organic eluent by a screening method including chromatography and/or spectroscopy, to identify the mucleic coll sequence encoding the diterpene synthase. The unicellular microorganism is useful as a diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence textins, volatile coll efensive signals, pollinator attractants and photoprotectants. This sequence represents DNA encoding a geranylgeranyl pyrophosphate synthase conting form part of the invention. Note: The sequence data for this patent did forms part of the printed specification but was obtained in electronic forms part of the parents and processing the sequence in the sequence and a sectionic continuants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             6490

```
This invention describes a novel method for the production of ketocarotenoids which involves culturing genetically modified organisms having modified ketolase (KLA) activity. The starting microorganisms produce carotenoids (naturally or by genetic supplementation), and are specifically microorganisms and plants involved in the method could include specifically microorganisms and plants involved in the method could include secherichia, Flavobacterium, Nostoc, Synochocystis, Hansenula, Pusarium, Dunaliella, Ranunculaceae, Camabaceae, Brassiceae, Amaratthaceae, Camabaceae, Brassiceae, Amaratthaceae, Solanaceae, Lamiaceae, Acacia, Calendula, Gentiana, Helianthus, Linum, Chaddendron, Spartium and Zinnia. The modified microorganisms cadditionally show elevated hydroxylase and/or beta-cyclase activity. The ketocarotenoids described in the invention include astaxanthin, cathaxanthin, and zeaxanthin. Ketocarotenoids are natural antioxidants and pigments, especially useful as pigmenting additives in animal feed, specifically feed for trout, salmon or shrings. Ketocarotenoid-producing genetically modified organisms can be used as feedstuffs or foodstuffs, in the production of ketocarotenoid-containing extracts or for producing feed or food supplements. The process provides carracts or for producing feed or food supplements. The process provides carracts, especially in the case of astaxanthin, preferably due to expression of at least one nucleic acid encoding hydroxylase and/or beta-cyclase. DNA encoding the whole primary ketolase sequence from Nostoc sp. strain PCC7120 was isolated, amplified by PCR and used to produce a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Production of ketocarotenoids with low hydroxylated by-product content, for use e.g. in pigmenting feedstuffs, by culturing genetically modified organisms having modified ketolase activity.

plasmid pNOSTF-G. A plasmid pMCL-Crt-YIBZ/idi/gps, for the synthesis of zeaxanthin in Escherichia coli, was constructed in 3 stages via the intermediate stages pMCL-CrtYIBZ and pMCL-CrtYIBZ/idi, using the high copy number plasmid vector pMCL200. Escherichia coli strain TOP10 was transformed with the plasmids pNOSTF-G and pMCL-Crt-YIBZ/idi/gps to give carotenoid producing strain.
                                                                                                                                                                                                                                                                                                                        ceararcarreaecaecrarere-cacceercaecerererraaereeeaeceecrare
